

EVOLV

WHOLE HOUSE WATER SYSTEM

Designed for families with high water demands and varying usage patterns. The Evolv whole home water system provides superior performance, reliability, and contaminant removal. Advanced softening and filtration matrix combined with superior valve technology eliminates troublesome water problems, and maximizes efficiency. Alternating tanks remove the need for additional reserve capacity, optimizing water and salt savings by precise regenerations every time. The Evolv whole house water system is designed for Phoenix area climate and water conditions. Every aspect of the system is specifically designed to enhance your homes water to a new level of quality.

EVOLV TO BETTER WATER...

TOMORROWS TECHNOLOGY TODAY

PRECISION

- 1 inch ported valve achieves optimal flow rates.
- Industry leading design, fewest moving parts for superior reliability.
- Solid state digital control valve provides accuracy and efficiency.
- Direct drive piston design, ensures precision valve dynamics, and reduces wear.
- Fewer moving parts, provide higher flow rates and proven reliability.
- Integrated by-pass provides simple servicing.
- NSF/WQA validated components.

INNOVATION

- KDF Redox cubes remove heavy metals, chlorine, and protects against microbiological growth and carbon media fouling.
- Centaur catalytic carbon filtration provides 3Xs greater filtration surface area and removes chlorine, chemicals, and other VOC's.
- Microform™ resin bead matrix removes hard water minerals and ensures superior efficiency.
- Heavy Duty distributor.

RELIABILITY

- Ensures quality water 24/7, with no downtime.
- Lithium ion battery back up.
- Industry leading valve design, uses the fewest moving parts for superior function.
- Heavy Duty Distributor, eliminates resin breakthrough.
- Safety shut-off float.

The Evolv system saves up to 30% on salt and water over single tank designs.
